### Trouble Shooting Checklist:

Did you SAVE before you ran Make?

Did you call wiced\_init before any other WICED function?

Did you call the init function for each peripheral used?

Do the project folder, C file, and make file all have the same name?

Is the APP NAME in the make file unique?

Did you clean after modifying certificates or other non-c/h files?

Did you call wiced\_network\_up before any network activities?

Did you create all structures before referencing them in function calls?

Did you use WPRINT\_APP\_INFO for debugging (e.g. WICED return codes)?
