DNS1: 8.8.8.8 DNS2: 8.8.4.4

Trouble Shooting Checklist:

Did you call wiced_init before any other WICED function?
Did you call the init function for each peripheral used?
Do the project folder, C file, and make file all have the same name?
Is the APP NAME in the make file unique?
Did you clean after modifying certificates or other non-c/h files?
Did you call wiced_network_up before any network activities?
Did you create all structures before referencing them in function calls?
Did you use WPRINT APP INFO for debugging (e.g. WICED return codes)?
